

18th International Weather and Climate Forum

A look back at the International Symposium "Extreme weather events: a Harbinger of future Climate?"

On Tuesday May 4th, the professional day of the [International Weather and Climate Forum](#) ended with success.

A 100% online International Symposium with a more than 9-contries coverage, a record!

This year, the Symposium's theme was **"Extreme weather events: a harbinger of future climate?"**, a highly topical issue, with the adoption of the climate bill by the French National Assembly on first reading.

Within the course of a day, personalities such as Jean JOUZEL, Robert VAUTARD, Jean-Michel SOUBEYROUX, Sonia SENEVIRATNE, Célia BLAUEL, Aurélien RIBES and other climatologists, sociologists, researchers and politicians have pushed the fields of reflection and contributed to move the lines on these crucial questions of extreme meteorological phenomena such as floods, heat waves, and how they will be perceived by society in the future.

« WHAT IS CURRENTLY CONSIDERED AS A HEATWAVE MAY BECOME THE NORM, OR EVEN A COOL SUMMER. THE ACTIONS THAT WILL TAKE PLACE BETWEEN NOW AND 2030 ARE ABSOLUTELY CRUCIAL ».

Robert VAUTARD

President of the Scientific Committee of the Symposium
Director of Institut Pierre-Simon Laplace.

346
participants on average
connected remotely

An international coverage in
more than
10 countries
France including overseas territories
(Reunion Island, Saint-Pierre and
Miquelon), Germany, Italy, Switzerland,
